

Gas Source Declaration with a Mobile Robot

Achim Lilienthal, Holger Ulmer, Holger Fröhlich,
Andreas Stütze, Felix Werner, Andreas Zell,
University of Tübingen

- Gas source declaration: determining whether a gas source is in the immediate vicinity
- MLFF neural networks and SVM were used for classification
- declaration trials were carried out in direct vicinity of the source and at a 80 cm larger distance
- Better results with SVM
- A classification rate of 87.5% was achieved with optimised parameters
